**MAXXAIR Vent Corp. Announces All-New MAXXAIR II Vent Cover
With More Vent Area Than Any Other Vent Cover**

TAMPA, Fla., August 30, 2007 – MAXXAIR Vent Corp., the industry leader in RV ventilation, announced the debut of the totally redesigned MAXXAIR II vent cover, with the most vent area of any vent cover on the market, for more fresh air, “rain or shine”. The solid one-piece, sleek aerodynamic design features exclusive side louvers that provide unsurpassed cross ventilation to increase the flow of fresh air, rain or shine, to prevent heat build-up, and let musty air, smoke and cooking odors escape.

The MAXXAIR II also includes exclusive, easy-to-open hinged brackets that allow total access for cleaning and inspection of the roof vent seal. No tools are required, and there is no need to purchase our MaxxBrackets as separate items, saving installation time and money. Easily removable, durable stainless steel snap lock pins secure the vent cover.

The 22.125” length x 20.25” wide x 9.5” high MAXXAIR II is made of super-tough high density polyethylene with maximum UV protection and mounts to all standard roof vents. It also mounts to the same holes as the original MAXXAIR vent cover, making replacing the older vent cover a breeze. The MAXXAIR II is available in the same popular colors as the original: white, almond, smoke, champagne, silver and black and has the same 6-year limited warranty, the best in the industry. Combining the best features of the original with this new design and new features makes the new MAXXAIR II truly the next generation of vent covers.

MAXXAIR Vent Corp. first introduced the RV vent cover in 1988. Today that product has become the industry’s top seller with more than 2 million purchased to date. For more information on the MAXXAIR II and to see all our products please visit us at www.maxxair.com or call 1-800-780-9893.
